

**Release Notes for GSS 1972-2022 Release 4
(November 2024)**

Datafile Release Notes

GSS Years Affected	Variables	Issue in the Previous Release	Fix in the Current Release
2022	BATCH, FEEUSED, FEELEVEL, HHRACE, INTID, INTETHN, INTHISP, INTRACE1, INTRACE2, INTRACE3, KISH, LNGTHINV, PHASE, VERSION	Variables not previously released for GSS 2022: <ul style="list-style-type: none"> • Interviewer characteristics • Survey paradata on incentives, survey length, respondent selection, and data collection milestones 	Included
2021, 2022	PRESTG105PLUS, SEI10EDUC, SEI10INC, MAPRES105PLUS, MASEI10EDUC, MASEI10INC, PAPRES105PLUS, PASEI10EDUC, PASEI10INC, SPPRES105PLUS, SPSEI10EDUC, SPSEI10INC, COPRES105PLUS, COSEI10EDUC, COSEI10INC	Variables not previously released for GSS 2021 or 2022: <ul style="list-style-type: none"> • Alternative method calculations of occupational prestige • Percentage of some college education by occupation based on ACS 2010 • Percentage of \$45K+ earners by occupation based on ACS 2010 	Included
2021	ADULTSINHH, BABIES, CHILDSINHH, PRETEEN, TEENS, GENDER1-GENDER14, MAR1-MAR14, OLD1-OLD14, RELATE1-RELATE14, RELHH1-RELHH14, RELHHD1-RELHHD14, RELSP1-RELSP14, FAMGEN,	Variables not previously released for GSS 2021: <ul style="list-style-type: none"> • Household structure and relationships • Unemployment in last 10 years • Spouse and cohabiting partner work details 	Included

	HHTYPE, HHTYPE1, HOMPOP, RESPNUM, RPLACE, RVISITOR, UNRELAT, VISITORS, UNEMP, WHATCO2, WHATSP2		
2018, 2021	SPWRKSLF2, SPWRKSLFFAM, COWKSUP, COWRKSLF2, COWRKSLFFAM	Variables not previously released for GSS 2018 and 2021: <ul style="list-style-type: none"> Spouse and cohabiting partner work details 	Included
2004, 2006, 2008, 2010, 2012, 2014, 2016, 2018, 2022	SUBSAMPRATE	New variable describing the subsampling rate used in the two-phase design for 2004-2018 and in 2022.	Included
2022	AGEHEF1-AGEHEF14	Responses incorrectly coded as 98 and 99.	Recoded to 6 ("18 or older, age unknown") and 7 ("under 18"), respectively
2022	CODIPGED, CODEG, CODEN, COEDUC, COEVWORK, COFUND, COHRS1, COHRS2, COIND10, COJEW, COOCC10, COOTHER, COPRES10, COREL, COSEI10, COWRKSTA, COWRKSLF, COWRKSLF2, COWRKSLFFAM, COWKSUP, DIVORCE, EVSTRAY, HAPMAR, SPDIPGED, SPDEG, SPDEN, SPEDUC, SPEVWORK, SPFUND, SPHRS1, SPHRS2, SPIND10, SPJEW, SPOCC10, SPOTHER, SPPRES10, SPREL,	In Release 3, six cases of MARITAL and MARCOHAB were updated but subsequent changes to their respective SP-, CO-, and other marital-related variables were not updated in conjunction.	Corrected

	SPSEI10, SPWRKSTA, SPWRKSLF, SPWRKSLF2, SPWRKSLFFAM, WHATCO2, WHATSP2, WIDOWED		
2022	DIPGED	Three cases who responded 7 “Don’t Know” were not coded to .d	Recoded to .d
2022	DOCSAT1	Miscoded 8 to .d, and left 9 as is. 8 stands for “Does not apply” while 9 should be “Can’t choose”.	Restored 8 values (with appropriate response label) Updated 9’s to .d’s
2022	FAMVSWK1, JOBVSFA1, TIREDHM1, TIREDWK1	Historically, cases reporting that this didn’t apply to them or that they had no job for these variables have been coded to 0. This is response 5 in the questionnaire.	Recoded to 0 “Doesn’t apply/No job”
2022	HAPUNHAP, HAPPY7	The 2022 version of HAPUNHAP uses a 7-point bipolar scale unlike the older version which uses a 4-point unipolar scale. The new responses for HAPUNHAP are more in line with HAPPY7 which has nearly identical wording.	2022 responses to HAPUNHAP are now in HAPPY7. HAPUNHAP is recoded to .y for 2022.
2022	HIVTEST1	Missing labels for multiple more recent month/year combinations.	Missing labels included
2022	KNOWSCHD, KNOWSCHD1	The 2022 version of KNOWSCHD introduced new response categories and so a new version should be created.	2022 responses to KNOWSCHD are now in KNOWSCHD1. KNOWSCHD is recoded to .y for 2022.
2022	LOCALNUM	Responses incorrectly coded to 11.	Recoded to .d
2022	MAEDUC, PAEDUC, SPEDUC, COEDUC	“Don’t know” responses were mistakenly coded to .n or .i	Recoded to .d
2022	MADEG, PADEG, SPDEG, CODEG	Cases where MAEDUC, PAEDUC, SPEDUC, and COEDUC are coded to .n or .i are set to 0 “Less than high school education” for MADEG, PADEG, SPDEG, and CODEG respectively. With the above change, these cases need to be recoded.	Recoded to .d
2022	MADEG, MAEDUC, MAIND10, MAOCC10, MASEI10	Cases had invalid values for mother’s (or female head of household’s) education or occupation information when only living with their father or a male head of household.	Recoded to .i

2022	PASEI10	Eighteen cases in 2022 had a value for PASEI10 but no corresponding value for PAOCC10, the variable from which PASEI10 is derived.	Recoded to .i
2022	RHHWORK, SPFALOOK	Two and seventeen cases, respectively, exceeded the top coded value for these variables of 97.	Recoded to 97
2022	SPPRES10	Fifteen cases had a reserve code suggesting they refused or skipped the question (i.e., .n or .s) despite not having a spouse.	Recoded to .i
2022	SPSEI10	Two cases who were not indicated to have a spouse had values.	Recoded to .i
2022	TOTALINCENTIVE	Previously AmeriSpeak completes (SAMPLE = 12 or AMERSTATUS = 1) had no incentive amount reported. In addition, 143 cases were updated to harmonize with FEELEVEL.	Included and Corrected, respectively
2022	WHATMA2, WHATPA2	Responses incorrectly coded to 5.	Recoded to .d
2021, 2022	DENOM, JEW, OTHER, RELIG	One case in 2021 was coded as 219 in the variable OTHER with the label “Messianic Jew.” This case should have been classified as Jewish and not Protestant following historic religious as reported in the GSS.	Corrected
2022	OTHER	Corresponding with the above change, the label for 219 needs to be updated to reflect the one case from 2022.	Label for 219 updated to “Cowboy Church”
2021	FUND	Five cases reported .d “Don’t Know” for their religion preference (RELIG) but were coded .n “No Answer” for fundamentalism (FUND).	Recoded to .i
2021	RELITENV, RELITENNV	Due to a programming error, respondents who provided a response of “No religion” to either RELITENV or RELITENNV were coded “No religion” on both variables. Given assignment to RELITENV and RELITENNV is based on FORM (see GSS 2021 Codebook section on Volunteered Responses Experiment), completes from FORM X should have an .i (“Inapplicable”) on RELITENNV and completes from FORM Y should have an .i (“Inapplicable”) on RELITENV. In addition, cases were erroneously assigned to .n (“No Answer”) as opposed to .i (“Inapplicable”) when they did not receive the question.	Corrected

2018, 2021	SPWKSUP, COWKSUP	Values for cohabitating partners (prefix CO-) were mistakenly in corresponding variables for spouses (prefix SP-).	Corrected
2018	SPOCC10, SPPRES10, SPRES105PLUS, SPSEI10, SPSEI10EDUC, SPSEI10INC	Cases with cohabitating partners (prefix CO-) had duplicate values in corresponding variables for spouses (prefix SP-).	Recoded to .i
2012	PAIDLTV	Correction implemented in 2022 Release 1 (through Release 3) was apparently missed in Release 3a.	Corrected
Multiple years	TRUST, TRUSTNV, TRUSTV	Response label for 1 “Can trust” not fully reflective of the response in the questionnaire.	Response label for value 1 updated to “Most people can be trusted”
All years	Multiple variables	<p>Variables that are included in the cumulative GSS datafile but that were not included before 2022 were supposed to be coded .y to indicate that this variable is not available in 1972-2021. Similarly, variables not included in 2022 were supposed to be coded .y to indicate that the variable is not available in 2022.</p> <p>Overall the hope is that using .y will make it easier to tell if two variables that are not part of the replicating core have ever overlapped in a given year. This process of updating .i values to .y values will be ongoing in future releases to reflect content from earlier GSS cross-sections.</p>	Recoded to .y

Codebook Release Notes

GSS Years Affected	Variables	Issue in the Previous Release	Fix in the Current Release
2022	N/A	The value 8,408 in Table A1 of the 2022 GSS Codebook (row “Eligible cases (partial or NIR)” and column “2022 GSS Cross-section”) is inconsistent with the corresponding numbers in the same row for the Baseline Frequency and AmeriSpeak Frequency. While the Baseline Frequency and AmeriSpeak Frequency numbers specify only cases that are eligible and non-completes, the 8,408 number includes eligible cases that are both completes	Updated

		<p>and non-completes (partial of NIR). To be consistent with the other columns, the 8,408 should be 4,259 to reflect eligible non-completes only.</p> <p>As a note: rows within each column do not sum to “Total” as the table does not report cases not required for calculating the weighted response rate, including out of scope cases and cases not subsampled for nonresponse follow-up.</p>	
2022	BABIES, BABIES_EXP, INTLHSPS, HELPBK, HELPNOT, HELPPOR, HELPSICK, LIFEIN5, LIFENOW, MNTHSUSA, PRETEEN, PRETEEN_EXP, RATETONE, TEENS, TEENS_EXP, WLTHHSPS, WORKHSPS	Select Codebook tables with partial numeric scales (i.e., scales with one or more labeled endpoints or midpoints) inappropriately summed non-labeled numeric values failing to demonstrate the correct distribution of responses.	Updated displaying all response values
2022	BUYVALUE, HEIGHT, NTWKHARD, USETECH, WEIGHT	Select Codebook tables described numeric scales in a minimally informative way given the range of values.	Updated collapsed response categories to be more consistent with the 1972-2018 Codebook
2022	BRV5, BRV16, ELDHELP, GENDER1-GENDER14, HIVTEST1, OLD1-OLD14, OTHER, OTHER_NEXT, OTHLANG1, OTHLANG2, OTH16, SPOTHER	Codebook missing labels on select response options.	Updated
2022	ETH1, ETH2, ETH3,	Codebook values were incorrectly associated with the dimensions of ETHREGION which do not match.	Updated
2022	Various	Over 100 variables released previously were excluded from the Codebook.	Included

**Release Notes for GSS 1972-2022 Release 3a
(April 2024)**

Datafile Release Notes

GSS Years Affected	Variables	Issue in the Previous Release	Fix in the Current Release
2022	FUND_NEXT	Variable not released	Included
2022	FUND, SPFUND, FUND16	Due to a programming error, the variable FUND was replaced by the responses to the repeated version of the question in the GSS Next follow-on. The existing responses should correspond to FUND_NEXT to correspond with RELIG_NEXT, DENOM_NEXT, and OTHER_NEXT.	FUND, SPFUND, and FUND16 have been standardized, and no longer interact with RELIG_NEXT et al.
2022	RELITEN, RELITENV, RELITENNV	Respondents who responded 4 “None” to RELIG should have been coded 4 “No religion” for the corresponding strength of affiliation variable. Some cases were instead coded to .i (“Inapplicable”).	RELITEN et al. now properly display “No Religion” where applicable.
2022	YEARVAL, YEARVAL1	YEARVAL in 2022 had a unique set of response options compared to the previous YEARVAL.	YEARVAL1 now contains the 2022 data.
2018	COOCC10	1 case had an invalid occupation code of 6870.	Recoded to 5160, consistent with their original open-ended response.

Release Notes for GSS 1972-2022 Release 3 (April 2024)

Datafile Release Notes

GSS Years Affected	Variables	Issue in the Previous Release	Fix in the Current Release
2022	AMERSTATUS, BASELINESTATUS, WTSSPS_AS, WTSSNRPS_AS	In addition to the nationally representative sample, the 2022 GSS Cross-section includes an oversample of Black, Hispanic, and Asian respondents, obtained from the NORC AmeriSpeak Panel, which utilizes the same national sampling frame as the GSS. These respondents were not eligible for the follow-on studies. These cases were not included in previous releases.	605 AmeriSpeak respondents are now included, increasing the final sample size to 4,149 respondents in 2022. AmeriSpeak cases are denoted by the indicator AMERSTATUS. Baseline 2022 GSS cases are denoted by the indicator BASELINESTATUS. AmeriSpeak cases are only available in the 2022 GSS single-year files, not the 1972-2022 cumulative file. The full 4,149 respondents can be analyzed with WTSSPS_AS and WTSSNRPS_AS.
2022	ADULTS, ADULTS_EXP	One case exceeds the top-code maximum of 8 (e.g., “8 or more”).	Recoded to 8
2022	AWAY1-AWAY14, WHERE1-WHERE14	A programming error made it seem like respondents who said that a household member was staying somewhere else were asked whether 13 (if no spouse) or 14 (if a spouse listed) persons were staying at the home at time of survey, even if there were only 1 or 2 persons in the household. These cases were temporarily recoded to .x	Only listed household members have a valid response now. Variables without a corresponding household member are now coded to .i
2022	BRV5, BRV16	BRV5 and BRV16 were not consistent in coding with its subsequent variables (e.g., BRV5PAR, BRV16PAR) using 1/2 for Yes/No instead of 1/0 like the follow-up questions.	Recoded “No” responses from 2 to 0
2022	BRV5DADNUM, BRV5MOMNUM, BRV16GMANUM, BRV16GPANUM, BRV16PARTNUM	Some respondents provided counts for the number of parents, partners, or grandparents who had died exceeding the likely range of possibility.	Top-coded to 4 “One or more, number unknown”
2022	BRV16CHILD, BRV16GRAND, BRV16OTH, BRV16SIB, BRV16CHINUM, BRV16DAUNUM, BRV16SONNUM	BRV16WHO did not ask about children who died before the respondent was age 16 so BRV16CHILD, BRV16DAUNUM, BRV16SONNUM, and BRV16CHINUM should not exist. This inclusion offsets BRV16GRAND, BRV16SIB, and BRV16OTH.	BRV16CHILD, BRV16SONNUM, BRV16DAUNUM, and BRV16CHINUM deleted. Variables appropriately assigned to BRV16GRAND, BRV16SIB, and BRV16OTH.

2022	BRV5SP, BRV5PAR, BRV5GRAND, BRV5CHILD, BRV5SIB, BRV5OTH, BRV5SPNUM, BRV5PARTNUM, BRV5DADNUM, BRV5MOMNUM, BRV5FILNUM, BRV5MILNUM, BRV5GMANUM, BRV5GPANUM, BRV5SONNUM, BRV5DAUNUM, BRV5CHINUM, BRV5BRONUM, BRV5SISNUM, BRV5SILNUM, BRV5CUZNUM, BRV5FRNDNUM, BRV5COWKNUM, BRV5OTHNUM, BRV16SP, BRV16PAR, BRV16GRAND, BRV16SIB, BRV16OTH, BRV16DADNUM, BRV16MOMNUM, BRV16FILNUM, BRV16MILNUM, BRV16GMANUM, BRV16GPANUM, BRV16BRONUM, BRV16SISNUM, BRV16SILNUM, BRV16CUZNUM, BRV16FRNDNUM, BRV16OTHNUM	Multiple cases who did not complete the GSS Next follow-on survey had values.	Recoded to .i
------	--	---	---------------

2022	COPRES10, COSEI10, SPPRES10, SPSEI10	Values for cohabiting partners (MARCOHAB = 2) were improperly populated to their spouse variable counterparts (e.g., assigned to SPSEI10 instead of COSEI10), leaving all responses for COPRES10 and COSEI10 as .i “Inapplicable.”	Values for cohabiting partners reassigned from SPPRES10 and SPSEI10 to COPRES10 and COSEI10, respectively.
2022	COWRKSFL, COWRKSFL2	A programming error erroneously put COWRKSFL into COWRKSFL2 leaving COWRKSFL blank and COWRKSFL2 unreported.	Corrected
2022	DENOM_NEXT, JEW_NEXT, OTHER_NEXT, RELIG_NEXT	A programming error swapped .i “Inapplicable” and .n “No answer” for cases who did not participate in the GSS Next follow-on study.	Recoded to .i
2022	FEMSELF, MASCSELF	FEMSELF and MASCSELF were displayed on the same screen on the web, but if one scale was skipped, it was originally coded .i. We wanted to better reflect this choice.	Recoded to .s
2022	INDUS10_NEXT, OCC10_NEXT	1 case not included in the GSS Next follow-on were erroneously coded on these two variables.	Recoded to .i
2022	INDUS10_NEXT	1 case had an invalid industry code of 9990.	Recoded to .n
2022	LIFEIN5	435 cases were incorrectly assigned to 11.	Recoded to .d
2022	LNGRLTNSHP	27 cases reported a long-term relationship status inconsistent with POSSLQ or POSSLQY.	Recoded to be consistent with POSSLQ or POSSLQY.
2022	MARITAL, MARCOHAB	6 cases reported a marital or cohabiting status inconsistent with POSSLQ or POSSLQY.	Recoded to be consistent with POSSLQ or POSSLQY.
2022	OCC10_NEXT	2 cases had invalid occupation codes of 9840 and 9990.	Recoded to 9830 and .n, respectively, consistent with their original responses.
2022	OTHLANG	A number of cases completed in the web mode were improperly coded as .n despite being completed on the web.	Recode to .s
2022	OTHLANG1, OTHLANG2, SPKLANG	2022 responses were not categorized before release and therefore assigned as .n	Recoded to valid response values for 2022 cases.
2021	OTHLANG, OTHLANG1, OTHLANG2	2021 responses made use of .n “No answer” for most cases instead of using .s “Skipped on web” for web cases. In addition, given both OTHLANG1 and OTHLANG2 were displayed on the same screen on the web, we wanted to better reflect this choice.	Recoded .n and .i’s to .s for 2021 web cases.
2022	PARTNERS, MATESEX, FRNDSEX,	A programming error inappropriately assigned cases to .n and .d for PARTNERS. Given skip patterns based on	Corrected

	ACQNTSEX, PIKUPSEX, PAIDSEX, OTHERSEX, SEXSEX, SEXFREQ, NUMWOMEN, NUMMEN, PARTNRS5, SEXSEX5, EVPAIDSX, EVSTRAY, CONDOM, RELATSEX, EVIDU, IDU30, EVCRAK, CRACK30, HIVTEST, HIVTEST1, HIVTEST2, HIVAFRAID, HIVIMMRL, HIVDSCRM	PARTNERS, the remainder of the variables listed were impacted in their responses.	
2022	SELFEMS	This interim processing variable was erroneously released.	Dropped
2022	WKSUB, WKSUB1, WKSUBS, WKSUBS1, WKSUP, WKSUP1, WKSUPS, WKSUPS1	Multiple cases for each of these variables have invalid responses of 6.	Recoded to .d
2022	YEARSVAL	34 cases were incorrectly assigned to 16.	Recoded to .d
2022	FAMGEN, FAMGEN_EXP, HHTYPE, HHTYPE1, HHTYPE1_EXP, RELATE1-RELATE14, RELHH1-RELHH14, RELHHD1-RELHHD14, RELSP1-RELSP14, RPLACE, RVISITOR, VISITORS	Variables not released addressing: Household structure and relationships	Included
2022	ADULTS, ADULTSINHH, CHILDSINHH, GENDER1-GENDER9, MAR1-MAR9, OLD1- OLD9, RESPNUM	Based on household structure and relationship information, cases needed to be reordered which impacted these variables.	Reorganized and corrected

2022	ADULTSINHH, CHILDSINHH, PRETEEN, RESPNUM, TEENS	2 cases previously were reorganized (see Release Notes for Release 2a, OLD1-OLD14) to properly order household members. However, not all variables were appropriately reorganized or recalculated.	Reorganized remaining variables and counts recalculated
2021, 2022	SAMPLE	Previous 2021 and 2022 releases did not specify a sample type for the 2021 cross-sectional sample. With the addition of the AmeriSpeak oversample in the single-year 2022 data file, another sample type is needed.	Included
2021, 2022	PARBORN	PARBORN was replaced by MABORN and PABORN with the transition for web in 2021. PARBORN can be constructed for 2021 and 2022 with the combination of MABORN and PABORN to preserve the historical variable.	Included
2021	REG16, MOBILE16	282 cases were miscoded to 9 "Pacific" when they were not living in the United States at age 16. This also impacted 70 cases for MOBILE16.	REG16 recoded to 0 "Foreign". MOBILE16 recoded to 3 "Different state".
2018	COOCC10	1 case had an invalid occupation code of 6870.	Recoded to 5160, consistent with their original open-ended response.
2018	PAIND10	2 cases had invalid industry codes of 2320 and 9720.	Recoded to 7860 and 7790, respectively, consistent with their original open-ended responses.
2016	INDUS10	1 case had an invalid industry code of 8250.	Recoded to 3980, consistent with their original open-ended response.
2014, 2018	MARCOHAB	4 cases had invalid values of 9.	Recoded to .n
Multiple years	CONINC, CONTRINC, REALINC, RELARINC	The values of these variables corresponding to the \$22,500 - \$24,999 categories in the original categorical variables appear to have been derived using incorrect midpoints. The correct midpoint should be \$23,750. This affects 1977, 1978, 1980, 1982, 1983, 1984, 1985, 1993, 1994, and 1996. The values assigned to the top-coded categories may not be consistent for certain of these variables for certain years. This affects 1994, 2010, 2018, 2021, and 2022.	Corrected

**Release Notes for GSS 1972-2022 Release 2a
(January 2024)**

Datafile Release Notes

GSS Years Affected	Variables	Issue in the Previous Release	Fix in the Current Release
2022	AWAY1-AWAY14 WHERE1-WHERE14	A programming error made it so respondents who said that a household member was staying somewhere else were asked whether 13 (if no spouse) or 14 (if a spouse listed) persons were staying at the home at time of survey, even if there were only 1 or 2 persons in the household.	Recoded to .x Once the NORC team can conduct a further review of the problem, these variables may be re-released in a future release.
2022	CHILDS	A new variable from the new Household Composition module was erroneously named CHILDS erasing the main CHILDS variable collected in the Core survey.	The Household Composition variable has been renamed CHILDSINHH. CHILDS is restored.
2022	OLD1-OLD14	In 2022, there was the option to denote an adult without an age (originally a value of 150) and a child without an age (value 151). These values are not labeled accordingly. In addition, 4 cases for OLD1 are less than 18 years old which is less likely given OLD1 is always supposed to be assigned to the householder who must be an adult 18 years old or older. 2 cases were single adult households and 2 of these cases had two household members with the same name and they responded about the younger member.	Revised values with appropriate labels were added for OLD1-OLD14 with 98 = “adult (age unspecified)” and 99 = “child (age unspecified)”. The age in OLD1 for the 2 single adult households was made consistent with the variable AGE. The 2 cases where two household members had the same name were reorganized so that the adult householder is in the OLD1 position with the younger householder moved to a different position in the list (e.g., OLD4).
2012, 2014, 2016, 2018, 2022	RATETONE	Value 10 was mislabeled “1 – Darkest”. It should be “10 – Darkest”.	Value label for 10 is now “10 – Darkest”
2022	RFAMLOOK	40 cases exceeded the top-code maximum of 97 (e.g., “97 or more”)	Recoded to 97
2022	SPDEN	11 cases miscoded to 25	Recoded to 50

Codebook Release Notes

GSS Years Affected	Variables	Issue in the Previous Release	Fix in the Current Release
2022	XMARSEX	These variables accidentally displayed the frequencies and labels from the variable TEENSEX.	Updated

2022	XMOVIE, XMOVIEY	These variables accidentally displayed the frequencies and labels from the variable PORNLAW.	Updated
------	-----------------	--	---------

Release Notes for GSS 1972-2022 Release 2 (November 2023)

Datafile Release Notes

GSS Years Affected	Variables	Issue in the Previous Release	Fix in the Current Release
All years	All variables	Due to the format limitation in SAS, the Release 3 of the GSS 1972-2021 data uses two format catalogs instead of one (please refer to Appendix B in the 2021 GSS Codebook for more information). This problem was retained into Release 1 of the GSS 1972-2022 data.	The number of formats used in GSS 1972-2022 was reduced to avoid the format limitations of SAS. Only one format catalog is needed now for the SAS data file. Some formats have been cleaned and simplified.
1972, 1973, 1974, 1975, 1976, 1977, 1978, 1980, 1982, 1983, 1984, 1985, 1986, 1987	WTSSPS, WTSSNRPS	This is a post-stratification weight (with and without adjustments for non-respondents) that was available for 1988-2022 as of the GSS 1972-2022 Release 1.	Post-stratification weight added for additional years, from 1972 through 1987. For more information, please refer to Methodological Report 135 . The release of these new weights support analysis of 1972-2022 series with a single weight. We welcome any feedback on your use of these weights.
2022	WTSSPS_NEA, WTSSNRPS_NEA, WTSSPS_NEXT, WTSSNRPS_NEXT	GSS baseline respondents were incorrectly flagged in the final data as being eligible (or ineligible) to be in the NEA Arts Participation and GSS Next follow-on studies. This resulted in an undercount of 271 eligible baseline respondents for the NEA follow-on and an overcount of 72 for the GSS Next follow-on. Eligibility is directly related to the creation of follow-on study weights.	Revised weights to reflect actual eligibility. Changes to estimates are considered minimal.
2022	ABDEFECT, ABDEFECTG, ABHLTH, ABHLTHG, ABNOMORE, ABNOMOREG, ABPOOR, ABPOORG, ABRAPE, ABRAPEG, ABSINGLE, ABSINGLEG, SUICIDE1, SUICIDE1G, SUICIDE2, SUICIDE2G,	Grid experiments were assigned by FORM with FORM X receiving the gridded version of the abortion and suicide questions. However, assignment by FORM was overridden in questionnaire programming based on MODE (mode of survey administration) since grid formatting is visually based which is only applicable to the web mode. Assignment to the non-gridded and gridded variables (suffix -G) was inconsistently applied. For more information on grid experiments, please refer to the 2022 GSS Codebook .	Non-gridded and gridded variables (suffix -G) now correspond with the original FORM assignment, to minimize user confusion on the experimental setting. For example, a respondent assigned to FORM X who completed the survey on the phone will have their responses in the gridded versions (e.g., ABDEFECTG, SUICIDE1G) despite not seeing the gridded version of the question.

	SUICIDE3, SUICIDE3G, SUICIDE4, SUICIDE4G		
2022	ENDSMT, ENDSMEET	The wording of ENDSMT (used in 2022) is ostensibly the same as ENDSMEET (used in 2018 and 2021).	2022 responses to ENDSMT are now in ENDSMEET. The variable ENDSMT has been deleted.
2022	ETHNIC	Select cases who originally responded Egypt, Mexico, Puerto Rico, or were incorrectly assigned to other countries.	Recoded to the correct countries
2022	ETH1, ETH2, ETH3	Expanded ethnicity groupings were implemented for ETHNIC in 2021 (e.g., 203 = “Congo”, 301 = “South Korea”, 505 = “Colombia”). All cases for these variables were not reassigned to these new groupings to match.	Recoded to the expanded ethnicity groupings
All years	ETH1, ETH2, ETH3	Responses coded 97 were inappropriately labeled as “Uncodeable”	Correct label “American only” applied
2022	HLTHSTRT	2661 cases were incorrectly assigned to 5	Recoded to .i
2022	LETINASN, LETINHSP	The version of this question asked in 2022 was not consistent with the version asked in 2000.	Created new variables LETINASN1 and LETINHSP1 for 2022
2022	NUMKIDS	15 cases were incorrectly assigned to values exceeding 7 (the maximum threshold for this variable).	Recoded 15 cases to 7 “Seven or more”
2022	RACDIF1Y, RACDIF2Y, RACDIF3Y, RACDIF4Y	Historically, form experiments have usually been assigned to FORM Y and thus were assigned with the -Y suffix. The RACDIF form experiment was assigned to FORM X, resulting in some confusion.	To reduce confusion about where the RACDIF form experiment occurred, these variables have been renamed with an -X suffix (i.e., RACDIF1X, RACDIF2X, RACDIF3X, RACDIF4X).
2022	SPANENG	All responses were incorrectly coded to .i	Recoded to 1 “English” and 2 “Spanish”
2021, 2022	OTHER	Responses coded 219 were unlabeled.	Values of 219 are now labeled “Messianic Jew”
2021	RECYCLE	Responses coded 5 were unlabeled.	Values of 5 are now labeled “Recycling not available where I live”
2018	WLTHWHTS, WLTHBLKS, WLTHHSPS, WORKWHTS, WORKBLKS, WORKHSPS, INTLWHTS, INTLBLKS, INTLHSPS	18 cases were incorrectly coded to 98 or 99	Recoded to .d and .n
2012	WWWHR	1 case exceeded the maximum possible threshold for hours in a week (i.e., 168 hours).	Recoded to the maximum value of 168

1996	DECAUTO, DECBED, DECGIFT	Multiple cases were incorrectly coded to .i	Recoded to .z (“Not applicable – have not faced this decision”)
All years	VETYEARS	Responses coded 4 had a typo in the label	Value label for response 4 is fixed
Multiple years	SEI10EDUC, PASEI10EDUC, MASEI10EDUC, SPSEI10EDUC, COSEI10EDUC	Multiple cases were incorrectly coded to 99.8 and 99.9	Recoded to .d and .n
2010, 2012, 2014, 2016, 2018	SCINEWS3	90 cases were incorrectly coded to 98 or 99	Recoded to .d and .n
2010	CONRINC	When RINCOM06 is any value but the top value (25), the corresponding value for CONRINC is missing.	Values for CONRINC now correspond with RINCOM06
2021, 2022	RINCOM16	Historically, RINCOM variables (e.g., RINCOM06) were skipped if the respondent reported “No” in RINCOME1 (“Did you earn any income from your job or jobs in {year}?”) and were coded as “Inapplicable” (.i) in RINCOM. In 2021 and 2022, these same cases were coded as 0 “No Income” in RINCOM16.	Recoded to .i
2021, 2022	XNORCSIZ, SRCBELT, SIZE	Due to issues raised by the shift from face-to-face to web data collection in 2021, as well as changing data cleaning processes, geocoded variables were delayed.	Included. For more details, please 2022 GSS Codebook .
2022	COWRKSFL2, COWRKSFLFFAM, COWKSUP, WHATCO2, OCC10_NEXT, INDUS10_NEXT, KIDSUND18, BABIES_EXP, PRETEEN_EXP, TEENS_EXP, ADULTS_EXP, ADULTSINHH, LNGRLTNSHP, RSBLNG18, RCHILD18, RPRNT18, RBIOPRNT18,	Variables not released addressing: <ul style="list-style-type: none"> • Work and occupations • Household Composition and Household Enumeration • Religion Experiments 	Included

	RADPTPRNT18, RSTPPRNT18, RGPRNT18, RFMLY18, RNTRLTD18, RRLTU18, RNRLTU18, RGPRNTU18, RBIOPRNT, RADPTPRNT, RSTPPRNT, PRNT, CHILDS_EXP, HOMPOP_EXP, AGEHEF1, AGEHEF2, AGEHEF3, AGEHEF4, AGEHEF5, AGEHEF6, AGEHEF7, AGEHEF8, AGEHEF9, AGEHEF10, AGEHEF11, AGEHEF12, AGEHEF13, AGEHEF14, HOMPOPH, RELIG_NEXT, DENOM_NEXT, OTHER_NEXT, JEW_NEXT

Release Notes for GSS 1972-2022 Release 1 (May 2023)

Datafile Release Notes

GSS Years Affected	Variables	Issue in the Previous Release	Fix in the Current Release
1988, 1989, 1990, 1991, 1993, 1994, 1996, 1998	WTSSPS, WTSSNRPS	This is a post-stratification weight (with and without adjustments for non-respondents) that was available for 2000-2021 as of the GSS 1972-2021 Release 3.	Post-stratification weight added for additional years, from 1988 through 1998. For more information, please refer to Methodological Report 135 . These are new weights and we welcome any feedback on your use of these weights.
2021	MAJOR1	Not released	Included
2021	RECYCLE	130 cases were incorrectly coded to .d “Can’t Choose”	Recoded to 5 “Not available”
2021	USWARYN, USWARYNV	Label for USWARYV and USWARYNV confused content of USWAR and USWARY	Labels for USWARYV and USWARYNV rewritten
2012	PAIDLV, PAIDLV1	PAIDLV indicated whether the respondent believed paid leave should be available to a full-time working parent of a newborn child. If they believed they should, PAIDLV1 recorded the months the respondent believed should be available. This split was considered inefficient.	PAIDLV and PAIDLV1 were combined into a single variable (PAIDLV) with cases who indicated no paid leave coded as 0 months.
